Absence management and claims administration made simple

Sunetplus is a PC software package that gives you effective support for absence management and claims administration. For example, Sunetplus enables you to record, transmit, manage and analyze accident and illness notifications electronically. Recording notifications is simple, and the data can easily be transmitted to all integrated insurance policies. Find out all about this efficient tool which is free for you.

Practical and reliable

Unlike a pure internet solution, all data and subsequent analytical capabilities remain with the company when you use Sunetplus. It works with a comprehensive authorization system and also encrypts transmitted data. It gives you the option of recording absences without notifying the insurer. You decide when you would like to transmit which data to us. Sunetplus also assists you with administration by indicating due dates and tasks, and helps you with coordination and communication (staff contact, requesting medical certificates etc.). By recording a claim notification, a case number is automatically generated which enables you and us to proceed with smooth and efficient processing.

Absences
Can be freely defined (sickness, accident, military service etc.)

Enter master data
Data import from HR systems or manual entries

Transfer loss reports (accident, sickness, care management)
Secure data transfer with full encryption

Analysis
Creditable basis for taking further steps and efficient means of prevention

Cost savings through professional absence and claims management

Benefits of Sunetplus
- Compatible with current insurance systems (including SUVA)
- As the tool licensee, AXA can give you Sunetplus for free as an AXA customer.
- Open interface to external HR systems allows you to regularly import all employee data
- Reliable authorization and transmission system for maximum data security
- Detailed analyses (you decide on the level of detail, whether at employee, team or company level)

Support
- After Sunetplus comes into operation, efficient support services are available to you through BBT software. Staff training in your business can also be organized if required.
